Offer-to-Joining Ratio: 90%

Hires Closed: 250+

Interviews Conducted: 2,000+

Time-to-Hire Improvement: 31% Faster

Cost-per-Hire Savings: 21%

GitHub Portfolio: 7 Repositories

Professional Summary

Full-cycle recruiter with 3+ years running end-to-end, candidate-first hiring across IT, Cloud (AWS, Azure), SaaS, Sales, Consulting, and Telecom mandates for 5 global enterprise accounts. Closed 250+ hires and ran 2,000+ structured interviews at a 90% offer-to-joining ratio using outbound sourcing, scorecards, and Greenhouse/Workday to keep pipelines clean and funnels fast. Extended this foundation into AI-enabled recruiting by building a 7-repository GitHub portfolio of AI sourcing workflows, live recruiting tools, a structured prompt library, and a Power BI analytics dashboard, applied independently to compress time-to-fill and sharpen candidate evaluation. Known for building hiring processes from scratch when no playbook exists, including closing niche senior technical roles and translating recruiting data into decisions leadership can act on.

Key Hiring Initiatives

Passive Niche Sourcing & Senior-Level Pipeline, Solution Architects

- **Challenge:** Extended hiring cycles (40 days) and shallow talent pools stalling delivery of senior Solution Architect mandates for a global enterprise account.
- **Action:** Deployed advanced Boolean strings and proactive market research across 4+ job boards, built ongoing relationship management cadences with passive candidates, and partnered with business leaders to sharpen evaluation criteria and compress timelines.
- **Outcome:** Reduced time-to-hire from 40 to 28 days (30% improvement), lifted offer-to-interview ratio 38%, and sustained a 90% offer-to-joining ratio with all mandates delivered on SLA.

Recruitment Funnel Optimization & ROI Recovery

- **Challenge:** A 42% post-technical-round drop-off was inflating cost-per-hire and producing inconsistent pipeline quality across service lines.
- **Action:** Conducted an end-to-end funnel audit, introduced pre-screening assessments and early compensation benchmarking, tracked stakeholder turnaround time for ROI visibility, and presented recruitment analytics to secure leadership approval for process change.
- **Outcome:** Improved screening-to-interview ratio from 1:5 to 1:3, cut cost-per-hire 21%, boosted offer-to-interview ratio 30%, and raised overall hiring productivity 35% within two quarters.

Experience

Associate Lead, Talent Acquisition

Infosys Limited, Bangalore

May 2022 – April 2025

- Elevated offer conversion 22 points (60% to 82%) through scorecard-driven, structured closing conversations across 250+ hires spanning Sales, Business, IT, Cloud, and niche technical mandates.
- Recovered recruitment ROI, delivering a 21% cost-per-hire reduction and 35% productivity gain within two quarters by auditing the funnel and introducing pre-screening assessments, scorecards, and TAT tracking.
- Reduced time-to-fill 31% (35 to 24 days) across 25+ concurrent Pan-India requisitions by combining talent mapping, Boolean search, and outbound sourcing across Naukri, Indeed, Shine, FoundIT, Greenhouse, and employee referrals.
- Delivered 60+ hires for Cloud infrastructure roles (AWS, Azure), improving fill rate 25% by partnering with hiring managers to build technical scorecards and sharpen evaluation criteria.
- Tripled diversity shortlists from 12% to 31% by designing and rolling out standardized inclusive slate guidelines across all active mandates, while growing referral-sourced hires to 21% of total offers through a redesigned employee referral program.
- Mentored and upskilled 3 junior recruiters on outbound Boolean sourcing and competency-based interviewing, lifting team-wide qualified applicant volume 23%.
- Owned the end-to-end candidate experience and standardized interviewer feedback loops, lifting candidate satisfaction 85% and closing 275+ offers with zero compliance escapes across reference and background verification.

- Cut leadership reporting effort 40% by building real-time KPI dashboards across 30+ requisitions that surfaced pipeline risk early, while maintaining 100% audited ATS compliance across 50+ requisitions in Greenhouse, Workday HCM, and INTAP.
- Maintained 100% SLA compliance with zero missed commitments by partnering with hiring managers and HRBPs across 5 global enterprise accounts to translate workforce plans into outbound sourcing strategy.

Career Break

Career Break

April 2025 – Actively Interviewing

Remained active in the Talent Acquisition field by designing AI-enabled sourcing frameworks, building recruiting workflows, and analyzing recruitment funnels to identify opportunities for process improvement. Built Power BI dashboards to track hiring metrics such as time-to-fill and offer conversion, while leveraging AI tools including Claude, Gemini, and ChatGPT to accelerate sourcing, generate Boolean search strategies, draft personalized outreach, and support candidate screening.

Actively interviewing for Recruiter and Senior Recruiter opportunities while continuously strengthening AI-enabled recruiting capabilities through hands-on portfolio projects and practical learning.

AI Recruiting Portfolio (Independent Project)

GitHub: github.com/anuskasidharth-a11y

Built June 2026, self-directed during job search, not professional employment

- Applied 3+ years of full-cycle recruiting expertise to build a 7-repository portfolio demonstrating AI-enabled sourcing, screening, outreach, and recruiting analytics using Claude and Gemini.
- Designed three end-to-end AI workflows (job description to Boolean search, resume to shortlist, outreach to response) and three live recruiting tools (Boolean generator, outreach message generator, resume screener).
- Built a Boolean search library segmented across 9 functional domains (.NET, Cloud & DevOps, Data & AI, HR & Recruitment, Java, Product & Business, Python, QA & Testing, Sales & Marketing) with Google X-Ray search references.
- Developed an interactive Power BI recruitment analytics dashboard modeling hiring funnel performance, recruiter productivity, sourcing insights, and diversity metrics using DAX.
- Authored a prompt engineering framework and an AI knowledge base covering responsible AI use, bias awareness, and human validation checkpoints for recruiting workflows.
- Produced 3 structured case studies, including passive talent pipeline strategy and enterprise hiring strategy for technology workforce planning.

Education

PGDM, Human Resource Management (MBA)

2020 – 2022

Xavier Institute of Management & Entrepreneurship, Chennai

BBA, Human Resource Management

2016 – 2019

Banasthali Vidyapith, Jaipur

Certifications & Professional Development

- Google AI Professional Certificate, 7-Course Series
- Generative AI for Recruiting Professional Certificate
- Workday HCM for Business Users
- Microsoft Power BI, In Progress
